

airmax®

MAXIMIZE YOUR ENERGY

What is Airmax®?

Airmax® is a nasal dilator which dilates the narrowest area in your nose, allowing more oxygen to be absorbed through the nose. Scientific research shows that this amount of air can be increased up to 176% when using the Airmax®.

The function of Airmax® is scientifically proven!
Airmax® is made from a soft, odorless and medically certified plastic (S.E.B.S).

There are two variants developed, the Airmax® Classic and the Airmax® Sport. The Airmax Classic gives positive effects to reduce snoring, colds and mild sleep apnea. The Airmax® Sport is designed to stay in the nose during exercise, allowing you while pursuing your sport performance to benefit both recreationally on the more professional level.

Airmax® increase the oxygen intake by widening the nasal passages!
